

**AMENDMENTS TO THE CLAIMS**

1. (currently amended) A method for digitally signing a document, comprising the steps of:  
receiving the document to be digitally signed at a first location;  
wherein the received document may be displayed in its entirety at the first location;  
generating a representation of the document;  
forwarding the representation of the document to a personal trusted device; and  
digitally signing the representation of the document at the personal trusted device.
2. (original) The method of Claim 1, wherein the first location comprises a trusted PC.
3. (original) The method of Claim 2, further including the step authenticating an identity of the trusted PC by the personal trusted device.
4. (original) The method of Claim 2, wherein the step of digitally signing further includes the step of entering a PIN into the personal trusted device.
5. (original) The method of Claim 2, wherein the step of forwarding further comprises the steps of establishing a serial cable connection between the personal trusted device and the trusted PC.
6. (original) The method of Claim 2, wherein the step of forwarding further comprises the steps of establishing a infrared connection between the personal trusted device and the trusted PC.
7. (original) The method of Claim 2, wherein the step of forwarding further comprises the steps of establishing a Bluetooth connection between the personal trusted device and the trusted PC.
8. (original) The method of claim 2, further including the step of displaying the document at the trusted PC prior to digitally signing the representation.
9. (original) The method of Claim 1, wherein the first location comprises a cryptography module within a PC.
10. (original) The method of Claim 9, further including the step of displaying the document at the PC in a browser associated with the cryptography module.

11. (original) The method of Claim 1, further including the step of forwarding the document from the first location to a trusted third party.
12. (original) The method of Claim 11, wherein the step of forwarding further comprises forwarding the documents from the first location to the trusted third party using SSL/TLS.
13. (original) The method of Claim 1, wherein the step of forwarding further comprises the steps of:
  - forwarding the document to a server prior to generation of the representation of the document;
  - forwarding the document and the representation of the document from the server to the trusted party.
14. (original) The method of Claim 1, wherein the step of forwarding the representation further comprises the step of streaming the representation and at least a portion of the document to the personal trusted device.
15. (original) The method of Claim 14, further including the step of:
  - selecting portions of the document to be streamed to the personal trusted device; and
  - displaying the selected portions at the personal trusted device.
16. (original) The method of Claim 14, further including the step of displaying only portions of the document contained within a buffer of the personal trusted device.
17. (original) The method of Claim 1, further comprising the steps of:
  - forwarding the document to the personal trusted device;
  - generating a second representation of the document at the personal trusted device;
  - and
  - comparing the representation with the second representation of the document.

18. (original) A method for digitally signing a document, comprising the steps of:
  - receiving the document to be digitally signed at a personal computer;
  - generating a hash from the document at the personal computer;
  - authenticating the personal computer from a mobile terminal;
  - forwarding the hash to the mobile terminal; and
  - displaying the document at the personal computer;
  - displaying the hash at the mobile terminal; and
  - digitally signing the hash of the document at the mobile terminal.
19. (original) The method of Claim 18, wherein the step of digitally signing further includes the step of entering a PIN into the mobile terminal.
20. (original) The method of Claim 18, wherein the step of forwarding further comprises the steps of establishing a serial cable connection between the mobile terminal and the personal computer.
21. (original) The method of Claim 18, wherein the step of forwarding further comprises the steps of establishing an infrared connection between the mobile terminal and the personal computer.
22. (original) The method of Claim 18, wherein the step of forwarding further comprises the steps of establishing a Bluetooth connection between the mobile terminal and the personal computer.
23. (original) The method of Claim 18, wherein the step of displaying the document at the personal computer further comprises the step of displaying the document in a browser at the personal computer.
24. (original) The method of Claim 18, wherein the personal computer comprises a trusted personal computer.
25. (original) The method of Claim 18, wherein the step of generating comprises the step of generating the hash from the document at a cryptography module in the personal computer.

26. (original) The method of Claim 18, further comprising the steps of:

forwarding the document to the personal trusted device;

generating a second hash of the document at the personal trusted device; and

comparing the hash with the second representation of the document.

27. (currently amended) A method for digitally signing a document, comprising the steps of:
- receiving the document to be digitally signed at a personal computer;
  - wherein the received document may be displayed in its entirety at the personal computer;
  - forwarding the document to a server;
  - generating a hash from the document at the server;
  - forwarding the hash and the document from the server to a trusted third party from the server;
  - forwarding the hash to a mobile terminal from the trusted third party; and
  - digitally signing the hash of the document at the mobile terminal.
28. (original) The method of Claim 27, wherein the steps of forwarding further comprises forwarding the documents using SSL/TLS protocol.
29. (original) The method of Claim 27, further including the step of requesting a digital signature at the PC.

30. (currently amended) A method for digitally signing a document, comprising the steps of:
- receiving the document to be digitally signed at a personal computer;
  - wherein the received document may be displayed in its entirety at the personal computer;
  - generating a hash from the document at the personal computer;
  - streaming the hash and at least a portion of the document to a mobile terminal; and
  - digitally signing the hash at the mobile terminal.
31. (original) The method of Claim 28, further including the step of:
- selecting portions of the document to be streamed to the mobile terminal.
32. (original) The method of Claim 28, further including the step of displaying only portions of the document contained within a buffer of the mobile terminal.

33. (currently amended) A system for digitally signing a document, comprising ~~the steps of~~:  
a personal computer for receiving and displaying the document to be digitally signed and enabling generation of a hash of the document; and  
a personal trusted device for displaying the hash and for enabling digital signing of the hash.
34. (currently amended) The system of claim 33 ~~34~~, wherein the personal computer further displays the document.
35. (currently amended) The system of Claim 33 ~~34~~, wherein the personal computer further includes a cryptographic module for enabling generation of the hash.
36. (currently amended) The system of Claim 33 ~~34~~, further including:  
a server for generating the hash from the document; and  
a trusted party for providing the hash to the personal trusted device.
37. (currently amended) The system of Claim 33 ~~34~~, wherein the personal computer streams the hash and at least a portion of the document to the mobile terminal.
